Fitness Functions for Your Architecture

– in Practice

Thomas Much

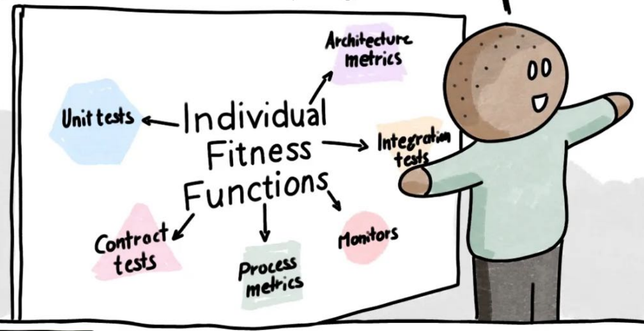
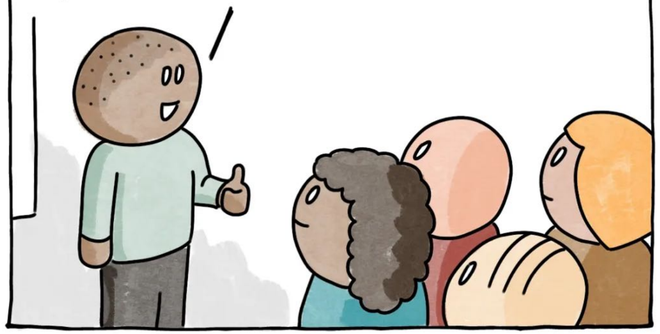
5 October 2023, Berlin

Comic Agilé

Fitness Functions provide an objective integrity assessment of the desired characteristics of our architecture, such as how well we meet our NFRs, our level of Cyclomatic Complexity or our degree of Modular Coupling.



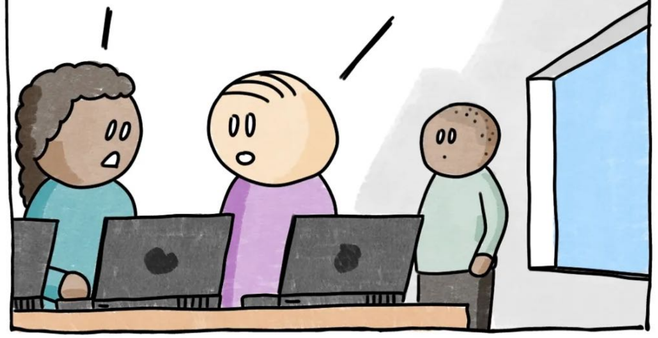
So, they're manual or automatic checks that verify how evolutionary our architecture is through tests or metrics. Each Fitness Function represents each requirement for our architecture.



Later

The Performance Fitness Function shows that our response time is too high!

But the Security Fitness Function is too low-we need better encryption!



And our Cyclomatic Complexity is through the roof!

Which one should we address? Alan?

Performance

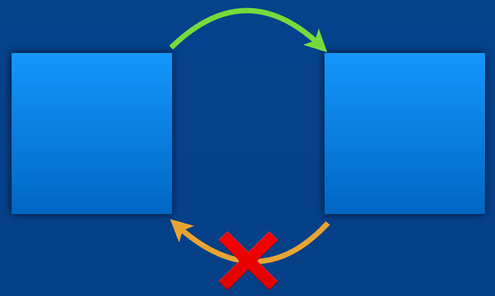
Security

Changes 😊

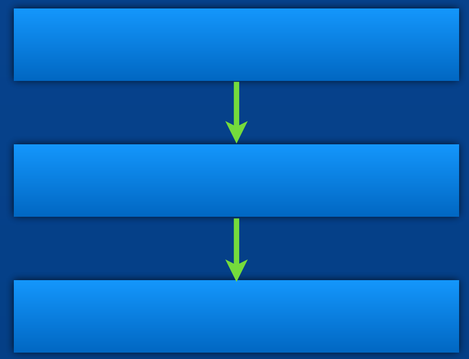
One Dimension Today:
Structure

If You **Don’t Care** About Structure
https://pixabay.com/photos/brick-brickwork-ruin-broken-decay-2205882/

Structures & **Dependencies**

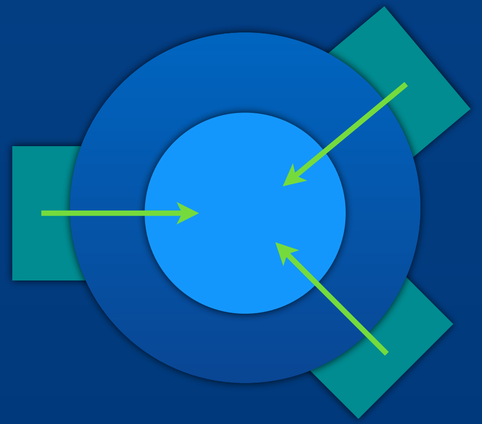


Modules / Components

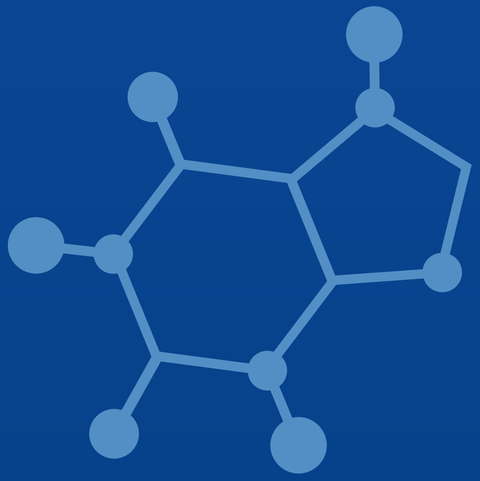


Layers

Verticals / Slices



Inside & Outside



Two Tools **in Practice**: ArchUnit & jMolecules

https://www.archunit.org/

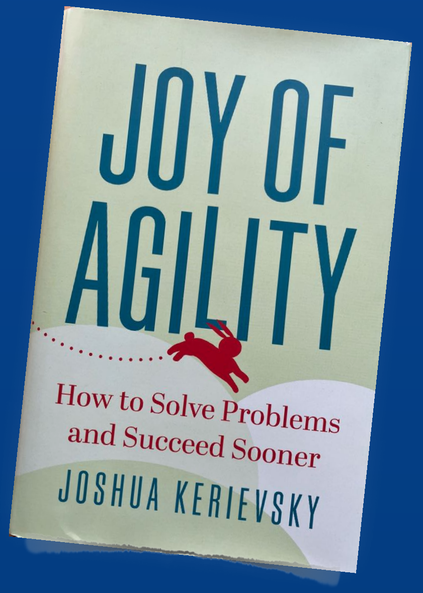
https://xmolecules.org/

Live Demo

Why is this about **Agility?**

„Moving **Quick** with Ease and Grace“

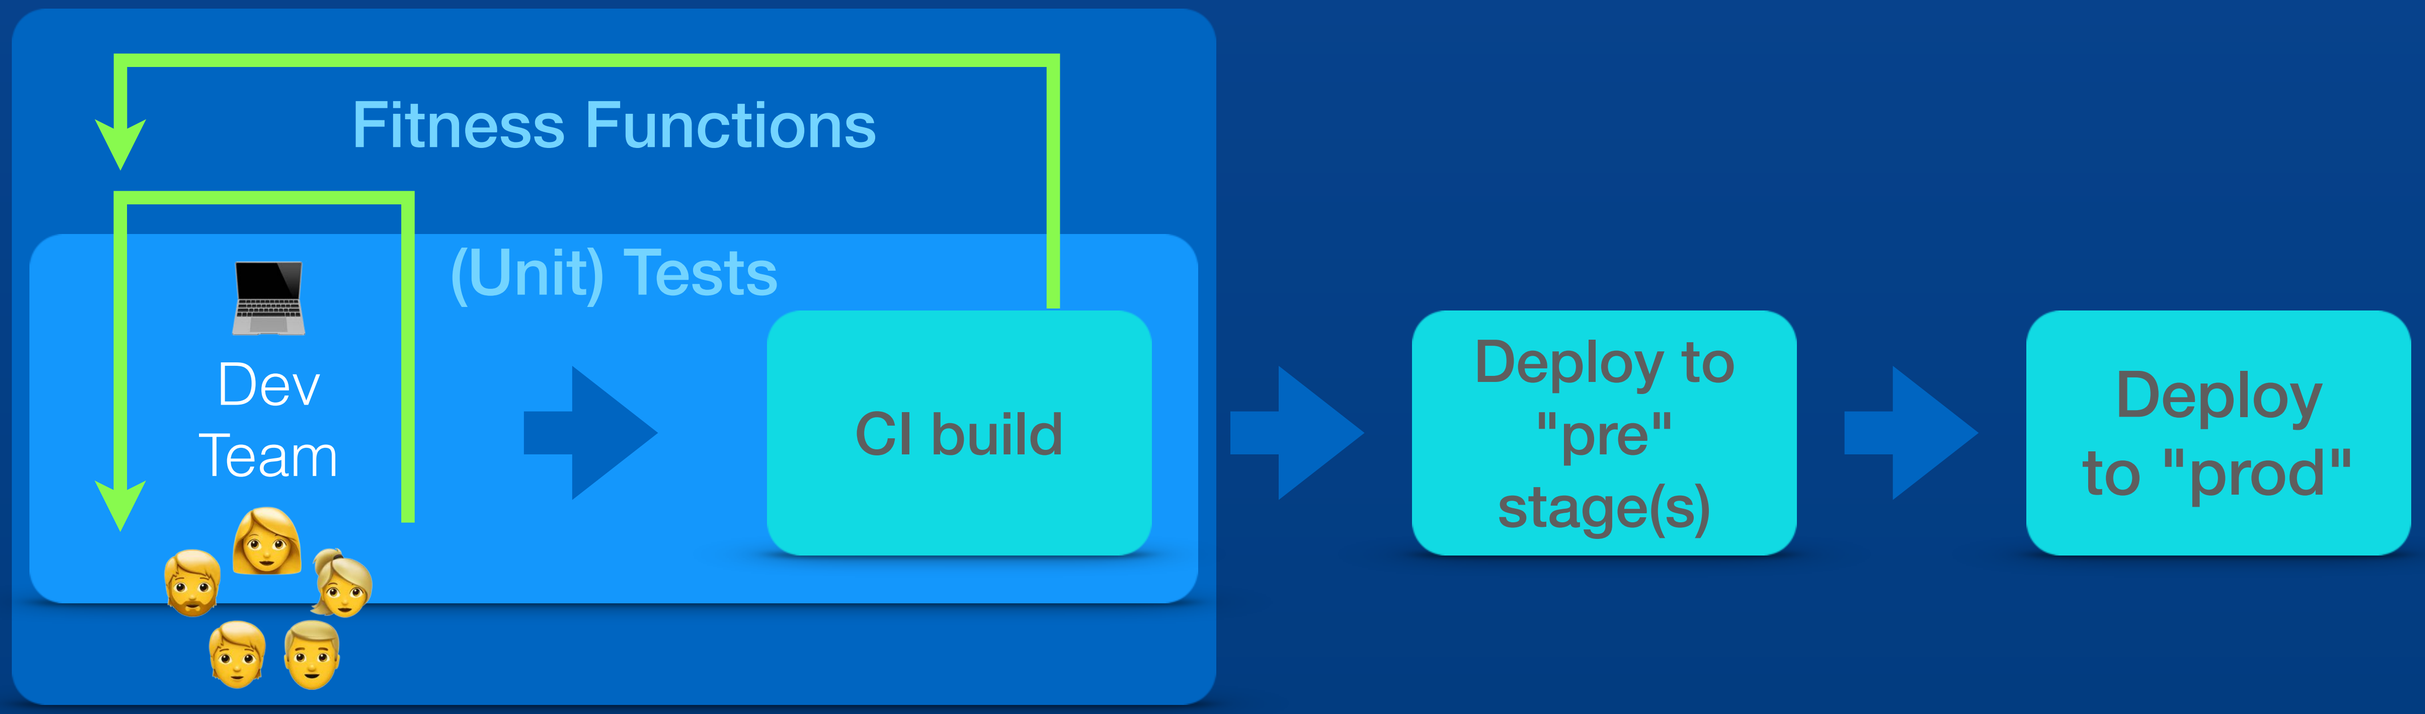
„Speed Under **Control**“



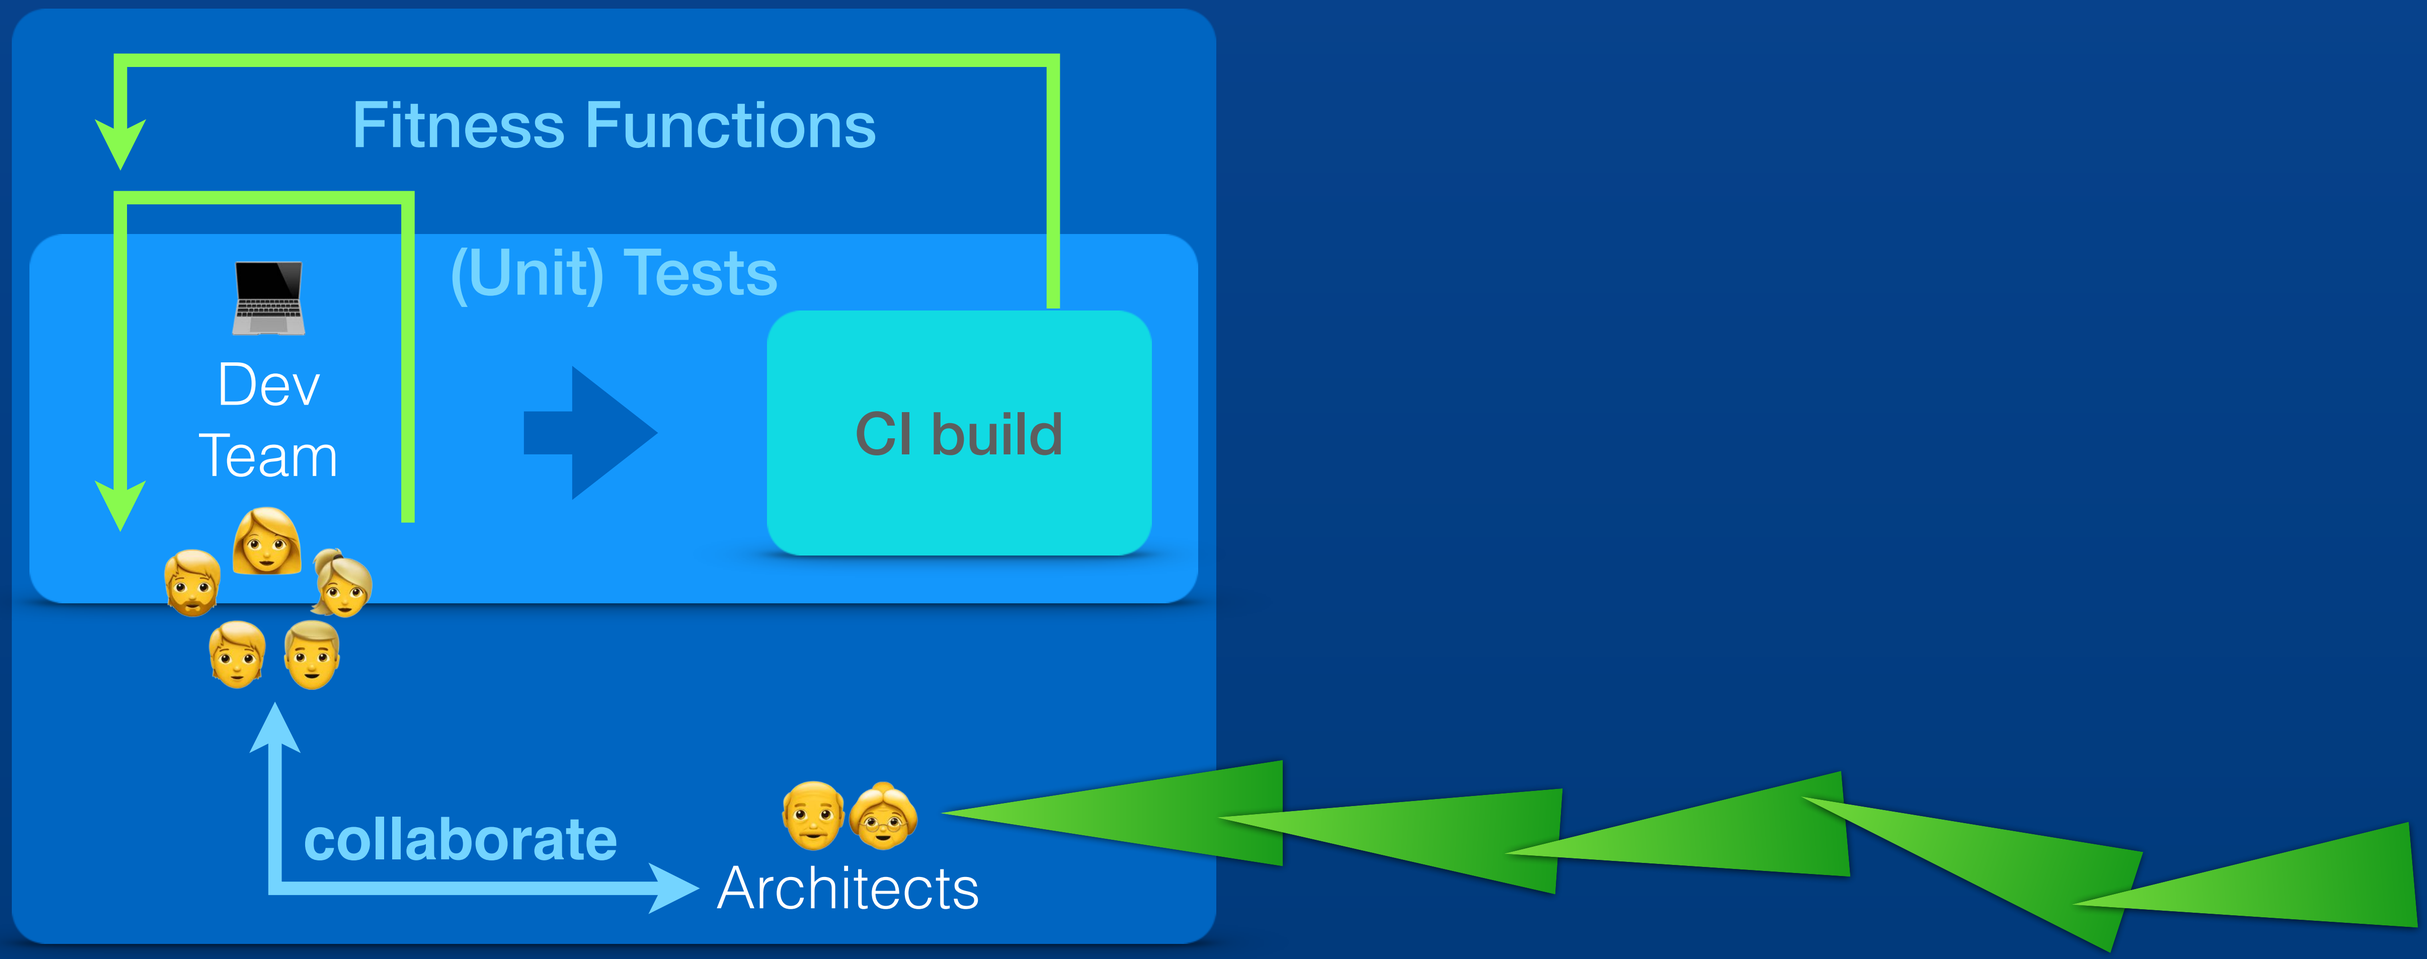
Fitness Functions:

Guidance for your Architecture – with **fast feedback loops**

Fast **Continuous** Feedback Loops



Who Writes Fitness Functions?



Lots of

Tools

More important:

Why

Wrap-Up

Fitness Functions

Keep architecture **evolvable**

Offer **guidance** (direction)

Offer **protection** against accidental changes

Foster architecture as a **continuous team sport**

Fitness Functions

Perfect Match

Agile meets Architecture
